SUMMARY

Backend Engineer with 5+ years building production-grade systems (Go, Python, PostgreSQL, MongoDB) across IoT, ERP, and e-commerce domains. Proven track record leading full SDLC from PRD-to-deployment, designing scalable architectures, and shipping user-facing products (500+ Play Store downloads). Currently pursuing B.S. in Data Science with applied projects in ETL pipelines, predictive modeling, and AI-powered document extraction.

WORK EXPERIENCE

PT Kreasi Indo Sejahtera

Feb 2025 – Apr 2026

Software Technical Lead (Freelance)

Depok, Indonesia

- Spearheaded technical strategy and backend architecture for an agritech/fintech livestock-trading platform, converting Business PRDs into technical specifications.
- Architected the monolithic system from scratch, defining core tech stack and software architecture to minimize early-stage complexity and accelerate time-to-market.
- Designed relational PostgreSQL schemas and built core e-commerce modules (product, cart, order, payment) engineered for production reliability.
- Automated CI/CD pipelines and cloud server infrastructure (Docker, GitLab CI), reducing deployment cycle time by 95% and minimizing release errors.
- Integrated real-time payment gateways and built an internal admin dashboard, boosting catalog management and order-processing efficiency by 90%.
- Led Agile SDLC (daily stand-ups, sprint planning) and enforced clean-code standards through peer reviews, reducing technical debt and achieving a 98% on-time delivery rate.

PT. Kawan Solusi Teknologi

May 2024 – Mar 2025

Backend Engineer

Tangerang, Indonesia

- Designed optimized relational PostgreSQL schemas for the SIMPATI detainee-management system, improving query retrieval performance across core modules.
- Engineered secure RESTful API modules in Python covering detainee/evidence transactions, reporting, file handling, user RBAC, and system configuration.
- Implemented secure document and image storage using MinIO, structuring AI-extracted data payloads in MongoDB for rapid query retrieval.
- Integrated RabbitMQ event-driven messaging with JSON payloads to interface backend services with internal AI document extraction pipelines.
- Engineered automated n8n data aggregation workflows operating at 15-minute intervals to power near-real-time operational intelligence dashboards.
- Orchestrated containerized application deployments using Docker and GitLab CI/CD across staging and production, maintaining high deployment standards.

Evermos

Oct 2022 – Sep 2023

Backend Engineer Support

Bandung, Indonesia

- Developed core inventory and logistics service enhancements in Go and MySQL, optimizing warehouse operations and resource tracking efficiency.
- Engineered automated 3PL financial reporting pipelines, cutting manual data compilation effort for finance and operations teams.
- Designed interactive Metabase analytics dashboards and complex SQL queries for business leadership, while monitoring 99.9% service health via Grafana.
- Automated recurring n8n workflows for production order validation, database-to-Google Sheets sync, and real-time Slack failure alerts.

Refactory

Sep 2021 – Sep 2022

Middle Software Engineer

Yogyakarta, Indonesia

- Engineered 5 mission-critical service modules (Blasting, Notification, Cron, Coal Stock, Geotech) for the OneKideco project using Go, PostgreSQL, Redis, and Swagger.
- Developed a commerce module and push notification services for Alva Auto (TypeScript, GraphQL, Vendure) enabling online motorcycle purchases with Midtrans payment integration.
- Architected real-time IoT motorbike telemetry services (Go, gRPC, Redis) and a headless CMS platform (NestJS, Strapi, PostgreSQL) supporting high-volume transaction loads.
- Built scalable microservices for multiple clients (Biofarma, Mediverse) — User, Search, CMS, and Rating services using Go, MySQL, Elasticsearch in a Dockerized environment.

Evomo

May 2021 – Sep 2021

Back-End Engineer

Jakarta, Indonesia

- Spearheaded backend development for an IIoT manufacturing analytics platform (Jeager), building the Admin Center service (Node.js, Express, MongoDB) and Energy Management System (Go, Gin, InfluxDB).
- Built the Overall Equipment Effectiveness (OEE) telemetry service for real-time factory equipment monitoring, authoring automated unit and integration test suites in Go and Node.js.

PRIEDS Technology
Software Engineer

Aug 2020 – Apr 2021
Tangerang, Indonesia

- Implemented automated end-to-end testing frameworks using Selenium, cutting manual testing time by 80% and accelerating release cycles.
- Managed full lifecycle of ERP software — feature development, architecture design (AngularJS frontend, custom REST APIs backend), and authored comprehensive technical documentation for stakeholders.

PROJECTS

QurbanAsyik – Qurban & Aqiqah E-Commerce Mobile App

2025

- Authored the PRD and TRD, designed the relational database schema, and defined the end-to-end software architecture for a livestock e-commerce platform.
- Integrated Midtrans payment gateway for secure real-time transactions and built the DevOps pipeline using CI/CD GitHub Actions and Docker.
- App: play.google.com – QurbanAsyik

ID/X Partners: Retail Data Warehouse & ETL Pipeline

2026

- Designed an end-to-end Data Warehouse using Star Schema architecture, consolidating multi-source transactional data from Microsoft SQL Server, Excel, and CSV files.
- Orchestrated automated ETL DAG workflows in Apache Airflow, implementing data quality validation checks and stored procedures for analytical reporting.
- Repo: github.com/titan2903/idxpartners-de-challenge

EDUCATION

Cakrawala University – Jakarta, Indonesia
Bachelor of Data Science, GPA 3.95/4.00

Sep 2024 – Aug 2028 (Expected)

ORGANISATIONAL EXPERIENCE

Student Government Association (SGA), Cakrawala University
Head of Research & Technology Division

Jan 2025 – Jan 2026

- Led the Research & Technology Division to recognition as Best Division within the university’s SGA for the 2025–2026 term.
- Directed multiple cross-functional research/tech projects with 100% on-time delivery, including an industry-academia collaboration app that reached 500+ downloads on Google Play.
- Organized a university-wide UI/UX design competition and served as strategic liaison in executive-level meetings.

UKM Robotic, Cakrawala University
Head of Research & Technology Department

Dec 2025 – Present

- Leading applied robotics R&D initiatives spanning IoT, Machine Learning, and Computer Vision.
- Directed 5+ engineering student members in developing ROS-based (Robot Operating System) navigation algorithms and hardware sensor integration.

SKILLS & CERTIFICATIONS

Languages/Frameworks: Go, Python, TypeScript, JavaScript, Node.js (Express, NestJS), Gin, AngularJS, GraphQL, gRPC

Data & Infrastructure: PostgreSQL, MongoDB, MySQL, Redis, Elasticsearch, RabbitMQ, Apache Airflow, Machine Learning

DevOps, Cloud & Tools: Docker, Kubernetes, Terraform, GCP, GitHub Actions, GitLab CI, Grafana, n8n, Linux, Nginx

Certifications: DataCamp Certified Data Engineer, Certified Practical DevOps Engineer (Studi DevSecOps), Machine Learning Specialization (DeepLearning.AI & Stanford)

Programs & Honors: Best Student – 4-Month DevOps Bootcamp (Studi DevSecOps), Data Engineer Project-Based Internship (ID/X Partners), Samsung Innovation Campus Batch 7 – Stage 2 IoT
